01. Global Impact

Setting a Standard the Industry Should Learn From

Reuters, one of the world's most authoritative media organizations, announced the Reuters Global Sustainability Awards 2025 in London. O'right achieved a historic breakthrough, becoming the only brand worldwide to win two of the three global Net Zero categories: the Net Zero Transformation Award (First Prize) and the Net Zero Supply Chain Decarbonization Award. O'right stood out on the global stage, bringing the name "Taiwan" into the spotlight amid resounding applause. This year's awards attracted over 800 companies across finance, energy, manufacturing, and technology. As an SME from Taiwan, O'right rose above leading global enterprises, proving that evidence-based governance and real transformation can earn worldwide recognition.

The Reuters judging committee praised O'right, stating, "O'right demonstrates exceptional sustainability leadership and has left a profound mark on the path toward industrial transformation. With a bold and scalable approach, it has successfully decarbonized consumer products, setting an example for many large corporations to follow. This honor is truly well deserved." The remarks became one of the most applauded moments of the ceremony, reflecting strong international recognition of Taiwan's institutional strength in sustainability.

O'right continues to build global trust through a governance system that is auditable, traceable, and credible. The company is among the earliest SMEs in Asia to adopt both TCFD (climate-related disclosures) and TNFD (nature-related disclosures) frameworks. Backed by SGS third-party verification and aligned with ISO 14068-1, O'right has achieved carbon neutrality at both the organizational and product levels, ensuring every disclosure and data point can be verified and traced. O'right also fulfilled its RE100 commitment to 100% renewable electricity two years ahead of schedule, transforming sustainability from aspiration into measurable proof and long-term accountability.

O'right's governance approach has been referenced by EU policies and academic institutions as a model for SME Net Zero governance implementation. This recognition highlights that Taiwan is not only a practitioner of sustainability but also helps shape new global governance methodologies, proving that institutional strength is not exclusive to large corporations and that SMEs can reshape the global sustainability landscape.

Founder and CEO Steven Ko stated, "Sustainability is no longer about image. The future belongs not to those who talk the most about being green, but to those who can be verified." This achievement represents more than a corporate milestone. It is a testament to how Taiwan's SMEs can earn global trust through integrity, transparency, and evidence-based systems.

02. Sustainable Beauty

Together,

We Prevented 6 Million Plastic Bottles from Entering the Ocean

Since launching our green transition in 2006, O'right has believed that a true circular economy must begin at the source. We have never treated recycling as merely a marketing slogan. Instead, from the very first stage of product design, we committed to using 100% PCR (Post-Consumer Recycled) plastic for our bottles, and to building a fully traceable circular system.

We know that simply encouraging recycling is not enough. That's why we actively promote responsible consumer habits aligned with community and official recycling systems. Through proper sorting, recycling, and reprocessing, discarded plastic bottles are transformed into new raw materials and reintroduced into the supply chain. Through circular reuse and remanufacturing, O'right believes that giving plastic a second life is not only about reducing waste—it's about creating new value.

Recycling and Remanufacturing: Completing the Circular Economy

Beyond adopting 100% recycled plastic bottles across our product range, O'right has pioneered the world's first recycled shampoo pump, made possible through innovation and engineering. Traditional pumps, made from complex mixed materials, have long been one of the most difficult components to recycle. Through technological breakthroughs, we transformed this overlooked detail into a recyclable solution—making O'right the first sustainable beauty brand to implement a complete circular economy, from product formulation to packaging. This milestone marks the final step in reducing both plastic use and carbon emissions. By establishing an industrial recycling system and a bottle-to-bottle regeneration supply chain, O'right has secured a stable and transparent supply of rPE, rPP, rPET, and

rPETG materials. We also prioritize mono-material packaging and non-electroplated designs to ensure that every component can truly be recycled. As a result, more than 6 million plastic bottles have been prevented from ending up in incinerators or the ocean.

Our Promise to Future Generations

O'right is committed to addressing ocean plastic pollution through real, scalable action. We believe sustainability is not defined by a one-time eco label, but by everyday actions that can scale. When 100% PCR bottles and fully recyclable pumps become the norm, their impact extends far beyond reducing carbon emissions or plastic waste. This is O'right's deepest respect for the Earth, and our strongest promise to future generations.

02. Sustainable Beauty

Clean Promise: 16 Free | What We Leave Out Matters More Than You Think

Clean beauty should never come at the expense of your health or the environment. From the very beginning, O'right has established the "16 Free" clean formulation standard, proactively excluding 16 ingredients that may pose risks to people or ecosystems, including SLS/SLES, mineral oil, petrochemical preservatives, and formaldehyde-releasing agents.

Our philosophy is straightforward: it's not that these ingredients can't be used—it's that they don't need to be. When scientifically validated, natural plant extracts can deliver the same results: gentle cleansing, long-lasting hydration, and effective repair. Choosing what not to add is, to us, a more responsible way to formulate and a gentler way to care for every inch of skin and every drop of water.

Ingredient Promise | Vegan. Non-GMO. Clean by Design.

All O'right products are made without animal-derived ingredients, are never tested on animals, and are Vegan-certified. They also meet additional clean standards, including Non-GMO, Gluten-Free, and more. Guided by USDA Biobased certification, we carefully select plant-based ingredients that are not derived from petrochemicals. These commitments go beyond meeting global clean beauty expectations. They represent the baseline responsibility we believe brands should uphold for skin, human health, and the environment. Choosing a truly clean product is not just a personal choice; it's a conscious way of living that respects and protects our planet.

From Clean Formulas to Green Factories O'right Sustainable Journey Toward Biodiversity in Action

Science-Based Carbon Reduction An SME Leading with SBTi and RE100

Carbon reduction must be guided by science, not assumptions. O'right is committed to the Science Based Targets initiative (SBTi), establishing a clear decarbonization roadmap aligned with the global goal of limiting warming to 1.5°C. In parallel, we are a member of RE100 and committed to using 100% renewable electricity. We achieved this goal company-wide in 2023, two years ahead of schedule, becoming the first company in Asia to do so and earning the RE100 Entering Leader Award. These recognitions represent more than achievements. They reflect our responsibility to act decisively on climate change. This is O'right's firm commitment to global climate action and biodiversity protection.

Climate Risk Disclosure | TCFD and TNFD

Long-term business resilience depends on the ability to identify and manage risk. O'right adopts leading international disclosure frameworks, including TCFD and TNFD, to assess climate- and nature-related risks and opportunities across our operations. Beyond carbon emissions, we evaluate risks related to water resources, land use, and raw material supply chains. By integrating environmental factors into enterprise risk management alongside financial performance, we recognize that climate risk is business risk.

03. Green Product

World Champion Scalp Revitalizer

The World's First

ISO 14068-1 Certified Carbon-Neutral Botanical Scalp Revitalizer

The World's First ISO 14068-1 Certified Carbon-Neutral Botanical Scalp Revitalizer

O'right once again sets a new global benchmark for sustainable beauty.

Its iconic hero product, the Caffeine Botanical Scalp Revitalizer, has officially passed the latest ISO 14068-1:2023 Carbon Neutrality Standard, independently verified by SGS — becoming the world's first cosmetic product to receive this prestigious certification.

This milestone is more than an achievement; it marks the beauty industry's formal entry into a new Net Zero era.

Rooted in the philosophy of "Beauty in Harmony with the Earth," O'right's Botanical Research Center applies advanced ultrasonic extraction technology to derive natural caffeine from Taiwanese coffee. This process preserves the maximum level of bio-active compounds while delivering proven scalp-revitalizing performance.

The formula is also certified by the USDA Biobased Program and listed on the U.S. Federal Government's sustainable product registry — a testament to O'right's unwavering commitment to green science.

From ingredients and manufacturing to packaging and carbon strategy, every detail reflects O'right's highest sustainability standards.

This is not sustainability as a slogan. It is sustainability as a responsibility — and as a measurable standard.

04. Green Lifestyle

From Sustainable Beauty to a Fully Green Lifestyle

Why are more and more people using more than just one toothpaste?

Because oral care, in fact, benefits from “time-based care.”

In recent years, toothpaste rotation has become a widely discussed lifestyle approach in oral care. The mouth is a delicate and ever-changing environment. By alternating toothpastes with different functions, care can better follow its natural rhythm.

Throughout the day, our needs are not the same: In the morning, we want fresh breath. During the day, we face stains from food and coffee. At night, the focus shifts to repair and relaxation.

O'right 100% Natural Toothpaste Wins Prestigious International Award

04. Green Lifestyle

From Sustainable Beauty to a Fully Green Lifestyle

Morning | O'right Toothpaste N° Zero

Morning calls for a sense of renewal. After a long night, the oral environment often retains subtle residue and heaviness, affecting the first breath of the day.

Powered by the gentle cleansing action of wood extracts and green algae, O'right Toothpaste N° Zero softly removes overnight buildup without irritation. A naturally balanced, mildly sweet botanical aroma unfolds, restoring a clean and refreshed oral state and allowing the day to begin with clarity and lightness.

Midday | Milk Thistle Whitening Toothpaste

Throughout the day, the mouth keeps pace with daily life. Food, seasoning, and coffee pigments gradually accumulate, often dulling the natural brightness of teeth.

Designed for daytime use, Milk Thistle Whitening Toothpaste helps gently remove surface stains while supporting oral cleanliness. It restores the teeth's natural clarity and leaves the mouth feeling refreshed and composed. For many, midday brushing becomes a small pause that helps both mouth and mind return to balance.

Evening | Black Bean Gum Care Toothpaste

Nighttime is when the oral environment needs rest and recovery the most. After a full day of chewing and stimulation, the gums often carry unnoticed fatigue.

With black bean extracts, Black Bean Gum Care Toothpaste provides calm and steady support for the gums, helping them gradually return to a balanced state. As the body rests, the mouth enters its natural restorative rhythm, preparing for a more comfortable and refreshed start the next day.

From Sustainable Beauty to a Fully Green Lifestyle
Time based oral care reflects a more considered way of living.

Fresh breath in the morning.
Gentle whitening throughout the day.
Deep repair at night.

Three 100% natural toothpastes are thoughtfully designed to work in harmony with different moments of the day, delivering comprehensive cleansing, whitening, and protection for optimal oral health.

**All benefits are achieved with proper brushing habits.*

04. Green Lifestyle

From Sustainable Beauty to Fully Green Lifestyle

A Winter Gesture of Care | O'right Hand Cream Exquisite Collection

Delicate hand care that delivers warmth and comfort throughout the winter.

- Green Tea Hand Cream | Infused with tea polyphenols to help strengthen the skin's protective barrier.
- Beauty Ferment Hand Cream | Enriched with natural spent grains to maintain moisture-oil balance.
- Wild Rose Hand Cream | Formulated with precious black rose extract to deeply nourish dry skin.

Crafted with a vegan formula and a lightweight texture, this collection delivers smooth, non-greasy hydration, leaving hands feeling naturally cared for. A winter-exclusive expression of warmth and beauty makes an ideal gift for sharing heartfelt care.

Moringa Foaming Hand Wash stood out among nearly one thousand products and was selected for the 32nd Taiwan Excellence Award, earning the Silver Award for its outstanding performance and sustainability credentials.

Formulated with natural foaming agents verified by EU organic organizations, it is free from environmental hormones and designed to protect natural ecosystems. Every gentle press reflects a commitment to caring for the planet.

An instantly captivating, refined woody scent

- Moringa seed extract helps purify and soothe the skin while locking in moisture, offering refined and delicate care.
- Warm woody notes create a calm, grounded, and serene atmosphere

BIO Ferment Essence Cleanser

The launch of BIO Ferment Essence Cleanser marks an important milestone as O'right extends its vision from sustainable beauty to a sustainable lifestyle. By selecting lower-risk cleansing ingredients and adopting more environmentally considerate formulations, we redefine the health standards of everyday cleaning, offering a purer and more trustworthy choice for both families and the planet. Formulated with naturally derived ingredients and designed for low ecological impact, the formula is gentle enough to be used on baby bottles as well as fruit and vegetable surfaces. It rinses clean without leaving residue, leaving a fresh, non-greasy finish while delivering effective cleansing performance.

BIO Ferment Essence Cleanser is coming soon, bringing a safer and more efficient approach to everyday cleaning.

04. Green Lifestyle

From Sustainable Beauty to a Fully Green Lifestyle

O'right **Direct Subscription Program**

Stock up on natural daily essentials for the whole family, at a better value.

Q: What is the O'right **Direct Subscription Program** ?

The O'right Direct Subscription Program allows you to purchase directly from our official website and stock up in one go. Products are delivered straight from our green factory, eliminating costs associated with retail channels, warehousing, and multiple stages of logistics. The value saved is fully passed on to you.

By purchasing in bulk, you can conveniently prepare premium natural daily essentials for your entire household at a more accessible price. Fewer deliveries also mean fewer transportation journeys, helping to reduce unnecessary carbon emissions. You save more while making a more environmentally responsible choice.

Q: What is the core philosophy of the [Direct Subscription Program](#) ?

The Direct Subscription Program is designed to make premium natural living an effortless part of everyday life. We invite you to choose what truly suits your lifestyle and continue selecting products that are genuinely good for your family.

Q: What benefits does the [Direct Subscription Program](#) offer ?

Direct Subscription Program | Five Exclusive Benefits

1. Best Value Through Subscription

By purchasing multiple items in one order, families can enjoy long-term access to premium natural products in a more balanced and sustainable way, without added financial burden.

2. Membership Tier Recognition

Subscription enrollment allows members to upgrade or renew their Gold or Black Card status, unlocking exclusive privileges, members-only benefits, and priority access to new product launches.

3. Direct Delivery from Our Green Factory

Products are shipped directly from the source to your doorstep, reducing intermediary distribution and logistics layers. The efficiencies gained are translated into tangible value for our subscribers.

4. Exclusive LINE Community Access

Join our official LINE community to receive early updates on new products, exclusive offers, and invitations to subscriber-only activities.

5. Flexible Replenishment, No Commitment

With no automatic billing and no fixed delivery schedule, replenishment remains fully flexible, allowing you to restock according to your own usage cycle.

O'right [Direct Subscription Program](#)

04. O'right ESG Gift

Customized ESG Gifts
for Corporations

■ O'right, Taiwan's Pioneer in ESG Corporate Gifting

As sustainability becomes both a defining principle and a source of competitive advantage, companies are facing unprecedented transformation challenges. Carbon reduction regulations continue to advance, ESG performance evaluations have become key benchmarks, and stakeholders' expectations for meaningful environmental action are steadily rising. Corporate gifting has evolved beyond seasonal gestures, becoming a direct extension of a company's values and strategic thinking.

As investors, consumers, employees, and partners place increasing emphasis on corporate purpose, a gift that is recognized on a global level does more than convey appreciation. It becomes an intangible symbol of corporate culture and a credible expression of ESG commitment.

The O'right Zero-Carbon Sustainable Gift Set was created precisely to meet this critical need.

| A Sustainable Gift Set Worthy of ESG Reporting

A gift is an extension of corporate values and a silent ambassador of brand integrity. As global attention turns toward net zero commitments and clearly defined carbon reduction pathways, corporate gifting is increasingly expected to reflect long-term vision and responsibility.

Choosing a gift created with 100% renewable energy and nurtured within green building facilities goes beyond expressing appreciation. It represents a shared commitment to sustainability and a public declaration of progress toward a more responsible future.

The O'right ESG Gift Set transforms every gesture of goodwill into a sustainability outcome that is transparent, verifiable, and suitable for public disclosure.

As one corporate partner remarked :
"This is the only gift set that can be included in an ESG report."

🏆 Sustainability Excellence and International Recognition

- SGS certified carbon neutral for four consecutive years
- Dual Reuters Global Sustainability Awards
- Sustainable Beauty Awards
- USDA Biobased Certified Products
- Manufactured with 100% renewable energy and packaged in 100% PCR bottles

🏆 Tailored for Corporate ESG Programs

- Corporate logo customization
- ESG information cards
- Compliance with green procurement standards

05. Global Impact

Speaking on the Global Stage | From Commitment to Action

Guided by the belief that being a good company matters more than being a big one, O'right has consistently taken part in the United Nations Climate Change Conference (COP), sharing its practical experience in advancing net zero carbon initiatives on the global stage. The company has also engaged with leading international media, including Reuters and Bloomberg Green, to articulate its approach to anti-greenwashing. These discussions highlight concrete actions ranging from product design and system level reform to the adoption of renewable electricity and transparent carbon disclosure.

We believe that brands can drive genuine change. Every word we speak and every action we take helps move the world forward. This is how we define our role and purpose.

O'right has brought global attention to the melting of Greenland's ice.

Initiated by O'right, The Last Ice of the Arctic: A Future Revealed by Greenland IPCC Experts International Forum & Documentary Premiere marked a sustainability journey spanning 16,400 kilometers. Beginning in Greenland and extending to National Taiwan University, Taipei, and Kaohsiung, the initiative enabled glacier science and human stories to meet in a tangible way on the island of Taiwan.

The Color of Ice is the second chapter of O'right's Melting Greenland project. When the first documentary, Melting Greenland, was released, the narrative adopted a first-person perspective, entering the Arctic to examine the human footprint behind ice loss and the responsibilities of business. In this sequel, the perspective shifts from documentation to dialogue, and from observation to action. O'right not only continues the Arctic story, but brings it back to Taiwan, transforming it into a shared sustainability dialogue that transcends geography and language.

Two invited speakers formed the core of the forum. One was Dr. William Colgan, a glaciologist from the Geological Survey of Denmark and Greenland and a core editor of the Seventh Assessment Report of the Intergovernmental Panel on Climate Change (AR7), who has long been stationed at research bases within the Arctic Circle. For this forum, Dr. Colgan applied the latest glaciological data to assess the potential impacts of Greenland ice melt on sea level rise in Taiwan. He noted that even if global carbon emissions were to cease entirely at this moment, ice loss in Greenland would continue, driving further sea level rise. Due to

its geographic conditions, Taiwan faces risks higher than the global average. This warning directly connected Arctic ice loss to Taiwan's future.

As part of O'right's efforts to bring global attention to the melting of Greenland's ice, sharing the stage with Dr. Colgan was Olennguaq Kristensen, Chairman of the Hunters' Association of Savissivik, a community in northwestern Greenland. An Inuit hunter who has trained sled dogs, hunted, and assessed ice conditions since the age of thirteen, Kristensen is a keeper of the ice's living memory. When he said, "When I set out, I still knew how to find my way home. Now the ice is melting, and I do not know how to get back," the room fell silent. It was not only a reflection on loss, but a generation's mourning for the disruption of natural rhythms. Kristensen's lived experience brought human weight to glaciological data, enabling audiences to see the close interconnection between culture, environment, and survival.

06. Environmental Education

A Green Factory in Harmony with Nature | Comprehensive Carbon Reduction Across Architecture, Manufacturing, and Energy

O'right's green building headquarters is more than a manufacturing facility. It is a sustainability hub that integrates green architecture, clean manufacturing, and renewable energy. As Asia's first Diamond-level low-carbon factory, the building has achieved Taiwan's EEWH Gold certification and Diamond-level building carbon footprint certifications. Its design incorporates natural ventilation and daylighting, rooftop sky gardens, rainwater harvesting systems, and an open ecological space shared with over 600 frogs.

Across manufacturing operations, every stage, from raw material storage and process water use to building temperature control, is managed through internationally recognized ISO systems and energy and resource monitoring. This ensures consistent implementation of clean production practices. In 2023, O'right fully transitioned to renewable electricity, becoming Taiwan's first small and medium-sized enterprise to fulfill its RE100 commitment. We believe sustainability is not a slogan, but a discipline reflected in factory operations and architectural design. By reducing environmental impact and supporting ecological balance, this site marks the starting point of every product's green journey.

Environmental Education | Inspiring Climate Action for Every Global Citizen

Rooted in nature, O'right established its Green Headquarters as a platform to redefine the net zero transition of sustainable beauty. By integrating global perspectives with local action, the brand has embraced environmental education as a core mission.

Initiated by Founder and CEO Steven Ko, the Melting Greenland project brings climate change into focus through on site Arctic documentation, scientific observation, and human centered storytelling. By translating scientific evidence into lived experience, the project moves climate change beyond abstract data and fosters deeper public understanding

and shared awareness. This initiative has drawn international attention to Taiwan and led to O'right being invited to share its insights at major global climate forums, including the 77th session of the United Nations General Assembly, COP28, and New York Climate Week, contributing scientific perspectives to global discussions on net zero pathways.

The Melting Greenland series has since been presented as a public interest program across schools and enterprises in multiple countries, serving as an important educational resource for advancing climate literacy. Through scientists' insights and firsthand records of Arctic transformation, audiences gain a clearer understanding of how climate risks influence global and Taiwan's energy transition, industrial resilience, and the living environment of future generations. These dialogues encourage a more action oriented approach to sustainability.

To date, O'right's Green Headquarters has welcomed over 40,000 visitors from more than 91 countries and has been recognized with an "Excellent" rating by Taiwan's national environmental education facility evaluation. Beyond serving as an educational site demonstrating sustainable governance and low carbon manufacturing, the headquarters reflects O'right's journey across net zero implementation, green factory transformation, and biological and industrial circular systems. Through these experiences, visitors witness how a small and medium sized enterprise from Taiwan can systematically advance sustainability and turn a shared vision into practice.

TogetherGreener !

07. Ko's Talk

At the close of 2025, O'right is undergoing a profound transformation, one that can be described as a true moment of renewal.

This past year has not been without its challenges. When viewed in isolation, individual moments can be disorienting. Yet when we step back and extend the timeline, clarity begins to emerge. As the steward of this company, I understand that standing at the forefront of green sustainability inevitably invites scrutiny. I face this openly and regard it as an opportunity to refine and reaffirm the very essence of our brand.

Safety has never been a slogan at O'right. It is a belief that requires no embellishment. To uphold this commitment, we initiated inspections and verifications that go beyond regulatory requirements. We chose to present facts transparently and to take a clear, responsible stance. We do so because we believe that honesty is the only viable strategy, and that action is the most credible response.

I often say that being a good company matters more than being a big one. Scale can always be surpassed, but values and integrity

This conviction may at times feel solitary, yet recognition from the global community has affirmed that we have remained on the right course.

A particularly meaningful moment occurred at the 2025 Reuters Global Sustainability Awards ceremony in the United Kingdom. O'right was honored with the top award. Notably, the organizers announced that there would be no second-place recipient. The absence of a runner-up spoke volumes. In the eyes of the judges, there was a clear and decisive distance between our standards and those that followed. It also underscored a principle we hold firmly: when it comes to uncompromising sustainability and safety, there is no room for ambiguity, only absolute commitment.

This recognition does not belong to O'right alone. It belongs equally to everyone who has chosen to place their trust in us.

Thank you for that trust. Guided by this global acknowledgment, we will continue to move forward with humility, sincerity, and determination. The future of O'right will be shaped by greater resilience, honoring the earth that sustains us and living up to the expectations you have placed in us.

Steven Ko Founder and CEO
